

Time Travel with Multi Parallel Universe & Predefined Theory

Shankar B. Dorkar

*Department of Information Technology, SVERI's College of Engineering,
Pandharpur*

Basic Concept:

Can we travel the time? There is multi universe? These all questions are in front of us. Lots of scientist are work on it & in those lots of confusion are also there. If we consider "universe" word then, in our mind "infinite" concept is born & then question is arises "A really universe is infinite?" or it have some limit ,some boundary, or special something which specify to describe that the universe have this end point.

I want to explain something to you .Consider "Universe is infinite" how we say's that it is infinite, we don't any signal, any evidences of boundary, limit of the universe, because we don't know structure of actual boundary of the universe till now.

Now consider another possibility, "On which bases we say that universe ,which is we say that it is infinite ,this is Only one universe".

On my point of view, there is not a single universe, Sir Stepen Hoking says that "There is one parallel universe is may be exists "but I say that" there is not a two, three, four ...there is infinite number of universe is present".

According to this we can travel the time & it is possible .other scientist say that for traveling the time we require at least 10 dimensions , and till now we have only 5 dimension (4 dimension+ 1 circular dimension),but this is not necessary on my point of view , how ? I tell you

All the scientist are agree or approve that there is two path present to travel

- 1) By Black hole
- 2) By Wormhole

Actually Sir Einstein say, that none of any object can travel with greater or equal velocity of light, But in Wormhole we can travel with speed of greater than light.

Wormhole present between two universes which is parallel to each other.

As I specify above there is "n" universe, where n= No. of Object in One Universe.

These all **universe is like as stack of disks**, which is parallel to each other, in between there is a wormhole is present, with that passage we can travel the time.

Now consider the single universe, which contain millions of galaxies, in that galaxies there is number of solar system, in that galaxies there is number of solar. This is ok till now, but now I says, that these universe is photocopy of each other.

In 15 Aug 1977 we get message from space .After decoding we get this is “WOW!”

In earth most of popular language is English language. This means that English language is not our planet language. It may be present on some other planet or universe. This means that another photocopy of earth is also present .and it may be present on other universe.

Photocopy means that, the activity of which is done at our universe these all activity is reflected to other universe also with object. e.g. when I sit to write this article that time my instance which is present in other universe is also sit for writing this article, same as when you read this article in this universe ,then you instance is also read this article.

Now concept of “**Time Ring**” comes, which is I want to explain. **Time ring** is a pattern of Time which is present in different universe. With the help of this we can travel the time.

Now consider the human object from our earth. IT have some validity, means after sometime this object will be expire this theory is work on all the object which is our universe.& one of the basic property of all object is it revolve or rotate around something for revolving it, it have some radius ,some path which is predefined from somewhere & for following that path one of the invisible force is present we called as “Dark force” .

Now we use hierarchical structure of object. now on the single universe there are N number of galaxies are present which is rotate around somewhere, we simply predict that galaxies are rotate around something, Because we can't find the radius of the circle, but these galaxies are moved from one place to other means that it is moving from some defined path like a ball which means for that direction is defined.

Now come inside the galaxies. There are number of the solar system, each contain minimum 1 big star which is source of power. Around it numbers of small, big planets are present & it rotate around that same like galaxies.

Now come inside the structure of planets, Planet have one or no. of structure of satellite or may not be satellite may be like a ball shape or like any other like a asteroid, these satellite are also revolve or rotate around the planet likewise planet & galaxies.

Now come on the planet, in planet basic structure of atom is like a solar system on which electrons are rotate around the center of atom.

In short the object which is in the universe is rotate around the other object because of darkforce. Now you say that moon is revolving around the earth & earth is revolve around the sun is because of gravitational force & magnetic field, yes of course we find these dark force which is around with us, because we reach on that particular point.

Beyond the galaxies we are not able to reach, so we can't find the structure of that force, so for that reason we called as dark energy or force etc.

Now point is "where is time here?" Object is start to travel, rotate around something and completes its orbit and start again.

Fig. Life Cycle of Object

If we apply this theory then it may be possible to trace our future and past . Because on page No. 3 line No.4 I specify that all the universe is photocopy of each other and on page No.2 I specify that each universe is parallel to each other like a stack of disk .

Now consider a inverse 'A' which contain object 'a' , then inverse B also contain instance 'a' c contain also contain instance of 'a' but time is different.

Now consider A is in Now 1990 and B is Now 2025 and C is Now 2050 if 'a' what to see a feature then he just goes on universe B and it travel 35 year time.

Fig. Time Travel & Multi Parallel Universe

In hierarchical structure I explain very few example, If you think about it, you will get all the object like this fashion, so now I define that the object which is rotate the path is fixed, even each activity is fixed & it is same to all instance, because object is reflected.

"Means, indirectly this "all" the universe which is present have same things/objects, even it perform all activity same".

This point, I gave name "**Predefined Theory**".

This theory is also affect to the human. If one of the human in hall that time he must be in the hall because it is predefined, if that human say that, "I want to go now in bedroom" this is also a predefined, means that even single single activity which take micro, nano seconds to complete it, This is all are predefined & that activity must be executed at particular time in the life of object.

Now finally say that for travelling a time is possible, for that we must follow a predefined theory on the multi universe which is parallel to each other & contain all the instance of object. The activity of the entire object is predefined & it newer changed.
